

CO-OP TESTIMONIALS

STARTUP EXPERIENCE

"The internship was amazing. I can honestly say I have only good things to say about what I experienced. The team was awesome and I learned a lot from this experience. I have learned a lot of finance terms in school but it was only until I started the internship that I understood that I barely learned anything. The internship gave me the opportunity to understand complex finance terms in depth and to comprehend what happens in industries and how it affects the stock market."

Rebecca Assaraf, TipRanks

"The internship gave me the opportunity to take part in "high-scope" project management and decision-making while engaging with the Chinese market. Starting the course thinking internship would involve rather less important or less central activities within a company, interning with Techcode had proven to be an unusual and an unexpected experience. I've had the chance to be a part of a small working team of various origins and languages, conducting together projects of various complexities at the same time. I've practiced a wide spectrum of responsibilities, multi-tasking in different fields - from facility management and productions, through running office community projects to writing expansion protocols of new accelerators in Europe. I've learned more about the importance of an accurate priority, time and task management, brushed up some old and new management skills and most important- learned a lot about small team work."

Uriel Rosner, Techcode

"It is the first time I have worked in an office environment. It helped me learn real life business skills. The partners and other coworkers have been very helpful regarding my future endeavors. I have enjoyed learning in a 'real world' environment that is not leaning in a lecture hall/classroom. It's practical experience."

Gillian Franks, Katzanell Dimant

"I got a great view on the startup culture Israel by getting to know one Israeli startup intensely. I got a good impression on how startups work in general and on how the process of establishing an app can work by learning about the history of 24me. Gilad and Liat were very open to explaining me and to letting me participate in the processes 24me went through. I hardly met people who are so passionate about what they are doing. This inspires me. I learned about how marketing can work in general and I got to know various tools in order to do marketing and in order to do sales. I was able to bring a benefit to 24me."

Jakob Gundel, 24me

"My internship helped me understand what path I want to take within the next few years in my studies. I'm glad I had an opportunity to do this right at the start of my studies, and it has changed me perspective completely from when I started until now. I believe this experience is indeed a "learning by doing" experience. Right away when starting my internship, I was immediately put into a working environment. They had me doing daily tasks they complete as employees of the company. It was really rewarding to be able to take part of a company and get a taste of what it would be like to work there."

Amit Volinits, Glispa

"One of the main thrills by arriving to the office is the fact that it is a law firm working in the field in which I will deal with in accordance with my chosen degree, law and business administration. The office work allows me to be the heart of the profession and understand closely and deeply the daily routine of lawyers and interns. This is significant to me due to the time that I am in, the time for classification for internship.

The internship enriches my knowledge and my skills especially in the field of marketing and business strategy, as during my work on the main project, as well as my meetings frequent with Anat Ben-Baruch, I get to know deeply the professional practice in the field and to be exposed to concepts, practices and skills that have not yet been exposed to my studies. In addition, significant work is done partly in English, which greatly contributes to my good performances in the foreign language."

Dana Gover, APM

"There is an amazing environment, I feel part of it as I worked there. You learn things everyday and you don't get excluded in any decision making. Also my mentor was really flexible with hours and deadlines. I have learned many things in this internship and gained a lot of experience as well. I learned how to manage social media, writing emails to users, making videos and editing and also pictures for social media and app store images."

Daniela Chaffer, 24me

"It was a great opportunity to experience first-hand the environment of a start-up. I have learned much and had fun, while still working hard and keeping a productive attitude. I would recommend to anyone who is interested in how an enterprise works to join the CO-OP program and join one of the amazing companies offered by the program. I have learned much about sales and the sales cycles in a newly-formed company. I also learned to utilize many business-professional softwares which will be of great use in the future, as well as many technical aspects of the specific product that Consumer Physics have developed."

David Metta, Consumer Physics (SCiO)

"This was my first real job, and it was an amazing experience. I got to learn a lot about the start up scene, something that I found really interesting. My company was also very supportive in a of the learning process. I learned to assess the financial situations of the start ups, about venture capital, about the different areas of start ups that are booming now."

Romina Stiglitz, proof

"It has been an amazing opportunity to work in this start-up. I had a lot of opportunities and everyone treat me not like the new guy but I easily got the trust of my supervisor being the same level of older employees. I was the youngest and I really enjoyed the possibility to be in an adult contest without feeling an outsider. In few days of training I learned all the tools I needed to use during my internship. I strongly believe I contributed very efficiently to improve the field where I was working in. I will always recommend to do and challenge yourself as I did."

Tommaso Argenton, 365 Scores

"You truly get hands on experience, and take part of every aspect of a business daily challenges and progress. I was very privileged to be accepted to a company with a great business culture. They were very welcoming and open for any question I might have. I learned how to formulate different business and marketing strategies, how to approach a challenge in a more organized manner, and I even developed my Excel capabilities!"

Yael Regev, Windward

"I have learned a lot, expand my knowledge and gain real life experience working at a high tech start up. In computer science it is important, in my opinion, to learn by doing, which is exactly how I was learning in the internship. I learned a new coding language and developed with it. I learned how a company manage its releases and working material."

Hilla Barkal, Nexar

"During my internship, I felt integrated and valued. The team is great and took the time to train me and correct me for each one of the tasks I was given. I learned how the early stages of a startup are, the struggles, hard work after hours, meetings, but having a goal and ambition above it all."

Joanna Cohn, Bllush
